RE: Application for Research and Development Position

To whom it may concern

My name is Settawich Pornkittiteeragul. I'm a highly motivated and dedicated with high responsibility, I would like to apply for Research and Development Position. I strongly believe that my education, skill-set, intensive training and extensive experience will be able to contribute and make valuable addition to your organization.

I am a holder of a bachelor's degree in Electrical Engineering from Thai-Nichi Institute of Technology where I was among the top 5 of students with the best academic result and Japanese and English language are mandatory course. In the university, I had been involving individual, couple and group projects, those allowed me to develop interpersonal, teamwork, presentation skills. One of my proudly present project is 'A Brushless DC Motor Speed Control' which had been challenging myself as it's individual project meaning that I planned and worked on it every single step. Moreover, with the passion in Japan, I decided to take Japanese course at Human Academy Japanese Language School in Japan which offer me a great opportunity to both live and learn and also has given me language skill and got closer to my goal.

After the graduation, I had suddenly taken training and preparing course by Hirate Technical Corporation. I am certified in many field as the company provides me necessary skill for working. Employed with Hirate as Electrical Engineering as the first two Thai employee in electrical department, I've dedicated more than 2 years of experience to work within Automotive industry. Moving to Japan, I can adapt myself fast to the entirely new environment and also can be under pressure as I directly worked with client at client's office with high expectation, however, this has resulted in handling the responsibilities and challenges of the post of an electrical engineer to its fullest. I can meet their expectation and build trust. I was in charge of examining

and testing electrical circuit of headlamp of vehicle, development and summarizing report issues. I have functional knowledge of circuit analysis and have gained expertise in use of specific tools and applications. I have been able to successfully identify engineered resolution to recurring electrical issues. It has been a pleasure to work with Hirate. I've got loads of valuable experience. I have enriched my knowledge in the areas of advanced engineering applications.

However, over two year working in Japan, it's proved me that I'm totally fascinated to work in electronic field especially circuit development. I am a fast learner and eager to learn more. Working in your organization provides me one more step closer to my goal and it would be great opportunity to continue my career path in Japanese Company.

As my experiences points out with my motivation and skills, I believe that it will make me an excellent addition to your organization as your Research and Development. I am keen to develop my professional skills and await the opportunity to discuss my credentials and set up a personal interview at your convenience. I have enclosed a copy of my resume for your consideration. I can be contacted at all times on the details provided above.

Sincerely,

Settawich Pornkittiteeragul
